"In order to learn good crutch walking, one must follow a systematic program with competent instruction. This program should include a muscle test to judge the subject's joint movements and strength, exercises to develop the muscle groups needed for crutch management, proper selection of the crutches to be used, correct measurement for the crutches, determination of the crutch gaits suitable to the disability and selection of the best methods the subject should use in performing everyday activities." Besides information on crutch-walking technique, this article presents a history of the use of crutches.

[see next page]

Reports on recent studies on the handicapped made at the Center for Safety Education of New York University. [see also article 570.] Dr. Tobias Wagner's study on employment efficiency in some 20 industries in eastern states shows "that with proper placement, disabled industrial workers are superior to comparable normals both on jobs of uniform and non-uniform processes." John Grimaldi's report on "Survey of Present Practices in Industrial Rehabilitation" showed "that, on the whole, industry is not yet alive to the advantages, both economic and social, of sound rehabilitation programs which permit the fullest use of disabled workers." Ray Murphy reported on the mistaken public belief in opposition by industrial insurance companies to employment of the handicapped, and the efforts of the Association of Casualty and Surety Executives to correct this misunderstanding. Julien H. Harvey and Mr. Grimaldi reported jointly on their preparation of a handbook for employers of the handicapped. Joseph Elkow's study concerns "Testing Methods and Techniques for Use in the Licensing of Drivers with Orthopedic Disabilities."

576. Restoring the Civilian Disabled to Jobs. Monthly Labor Review, June, 1945. 60:6:1231-1235.

Reviews provisions of Vocational Rehabilitation Act Amendments of 1943, and presents statistics on cases rehabilitated and in service, and on expenditures. Lists the recommendations for research made by the House of Representatives special Subcommittee to Investigate Aid to the Physically Handicapped [see article no. 152.] "43,997 disabled persons in the United States were restored vocationally and placed in employment designated as suitable, during the fiscal year ended June 30, 1944. Of these, 10,076, or 22.9 percent, had never worked; 39,072, or 88.8 percent, were not employed at the time the process of rehabilitation began. The average earnings of the group as a whole, after their economic restoration, reached a total of \$6,482,225 a month--more than 12 times their previous earnings. This monthly sum exceeded the entire year's expenditures."
